

LSH Series Standard Type Linear Guide

Product Introduction

Product Features

1. With self-adjustment ability

X-shaped (45° - 45°) of curved groove on cross section design makes it self-aligning. Even small misalignment exists on the mounting surface, this design can help absorb it and maintain high precision, smooth and stable linear motion.

2. High rigidity, equal load on four direction design

The 45-degree contact angle design of the four rows of steel balls and the raceway allow the steel balls to achieve the ideal two-point contact, and can withstand the action and reaction force from the radial and lateral direction. Meanwhile, pre-load can be applied to increase extra rigidity if necessary.

3. Interchangeable

Because of the strict control on manufacturing process, the dimensional accuracy is stable and within the set tolerance. Besides the ball retainer design can prevent steel balls from falling out. Therefore when assembling, blocks are interchangeable within the same spec and still maintain consistency of pre-load and accuracy.

			SM6: M6 Nipple				SP01: PT1/8 Nipple					
⑫Packing type	Blank: the block and rail are assembled B: block and rail are put separately											
⑬Rail type	Blank: Top-mount T: Bottom-mount											

★[Note 1] Dustproof standard type please refer to Pg. 26. for more detail.

★[Note 2] Self-lubricator standard type please refer to Pg. 30. for more detail.

[Note 3] For LSH-BB series, standard length of a rail is 3 m.

Please contact with our company if length of rail exceeds the maximum.

Add: Heavy preload is available for LSH25/30/35/45 only.

⑯Rail type	Blank: Top-mount T: Bottom-mount					

★[Note 1] Dustproof standard type please refer to Pg. 26. for more detail.

★[Note 2] Self-lubricator standard type please refer to Pg. 30. for more detail.

[Note 3] For LSH-BB series, standard length of a rail is 3 m.

Maximum length of two-joint rail is 6 m.

Maximum length of three-joint rail is 9 m.

Please contact with our company

if length of rail exceeds the maximum.

Add1: Number of joints cannot be more than 2 times(three rails at most).

For LSH15/20/25, maximum length of jointed rail is 11800mm.

For LSH30/35, it's 11880. For LSH45, it's 11805.

Customization is needed for joint times more than standard.

Add2: Heavy preload is available for LSH25/30/35/45 only.

Rail (4m) Specification

1. The maximum length of a single rail is 4,000 mm, please refer to the table for more detail about edge pitch of first mounting hole (S) and last mounting hole (E).

2. The edge pitch of first mounting hole (S) and last mounting hole (E) should not be greater than 1/2P. Overlong edge may induce unstable installation and affect the accuracy.

$$L = (n-1) \times P + S + E$$

L: Total length of rail(mm)

n: Numbers of mounting holes on rail

P: Distance between bolt holes(mm)

S: Edge of first mounting hole(mm)

E: Edge of last mounting hole(mm)

Model	LSH15	LSH20	LSH25	LSH30	LSH35	LSH45
Pitch(P)	60	60	60	80	80	105
Rail (4m) Standard Edge Pitch(S)	20	20	20	20	20	22.5
Rail (4m) Standard Edge Pitch(E)	20	20	20	60	60	92.5
Min. Edge Pitch(S/E min)	5	6	7	8	8	11
Max. Edge Pitch(S/E max)	55	54	53	72	72	94
Maximum length(Lmax)	4000	4000	4000	4000	4000	4000

Note:

- Joint rail must be chosen if length of rail exceeds the maximum.
- When deciding edge pitch, it should be within the range of above table. There would be risk of broken hole if pitch is out of range.
- Maximum length of rail for standard means the maximum length of rail can be chosen when both sides of edge pitches are standard.

Standard Type Linear Guide

LSH Series

Accuracy

LSH standard type linear guide comes with 3 accuracy levels.

 <p>The identification line of the Datum</p>	Accuracy Standards (mm)									
	Accuracy	N : Normal			H: High			P: Precision		
	Model	15/20	25/30/35	45	15/20	25/30/35	45	15/20	25/30/35	45
	Tolerance of height H	±0.1			±0.03	±0.04	±0.05	±0.015	±0.02	±0.025
	Variation of height ΔH	0.02	0.025	0.03	0.01	0.015		0.006	0.007	
	Tolerance of width Y	±0.1			±0.03	±0.04	±0.05	±0.015	±0.02	±0.025
	Variation of width ΔY	0.02	0.03		0.01	0.015	0.02	0.006	0.007	0.01
	Parallelism of C-surface relative to A-surface	Parallelism of raceway (Refer to Table 1)								
Parallelism of D-surface relative to B-surface	Parallelism of raceway (Refer to Table 1)									

Table 1 : Parallelism of the raceway

Rail Length(mm)		100 under	100~200	200~300	300~500	500~700	700~900	900~1100	1100~1500	1500~1900	1900~2500	2500~3100	3100~3600	3600~4000
Accuracy														
Parallelism of the raceway(μm)	N	12	14	15	17	20	22	24	26	28	31	33	36	37
	H	7	9	10	12	13	15	16	18	20	22	25	27	28
	P	3	4	5	6	7	8	9	11	13	15	18	20	21

Preload Level

1. Preload interference

The LSH standard type Linear Guide has three preload categories: A, B and C.

Choosing suitable preload level will enhance rigidity, precision and torsion resistant performance of the linear guide.

Model	Radial interference(μm)			
	Standard clearance(A)	Light Preload(B)	Medium Preload(C)	Heavy Preload(D)
LSH15	-4~+2	-12~-4	-22~-14	-
LSH20	-5~+2	-13~-5	-23~-15	-
LSH25	-6~+2	-14~-6	-24~-16	-33~-25
LSH30	-7~+2	-16~-7	-29~-20	-38~-29
LSH35	-8~+2	-21~-11	-34~-24	-43~-33
LSH45	-9~+2	-25~-16	-38~-27	-47~-36

2. Common Application

Refer to following table for suitable application of different preload grade:

Preload grade	Requirement	Common Application
Standard clearance(A)	One axial movement, small vibration and impact, accuracy requirement is low	Conveyor Machine, Semiconductor Equipment, Stage Equipment, Press Machine, Welding Machine and other light movement equipments
Light Preload(B)	Equipment that requires light-load and high-precision.	Z-axis movement for industrial use, NC lathe, EDM, Precision XY platform, Vertical machine center, measurement instrument, material feeder or industrial robot
Medium Preload(C)	Equipment that requires high rigidity, large vibration and shock.	Machining centers, NC lathes, grinders, vertical or horizontal milling machines, boring machines, tool guides, heavy cutting machines.
Heavy Preload(D)	Equipment that requires higher rigidity, larger vibration and shock.	Machining centers, NC lathes, grinders, vertical or horizontal milling machines, boring machines, tool guides, heavy cutting machines.

LSH Series

Installation Illustration

1. Allowable tolerance of mounting surface

LSH series is an arc-shape, two-point contact design of linear guide. Its self-centering feature allows some tolerance on mounting surface without affecting the smoothness of linear motion. The allowable tolerance is indicated in following table:

Model	Allowable tolerance of parallelism P(μm)			Allowable tolerance of top and bottom S (μm)		
	Standard clearance(A)	Light Preload(B)	Medium Preload(C)	Standard clearance(A)	Light Preload(B)	Medium Preload(C)
LSH15	25	18	13	130	85	35
LSH20	25	20	18	130	85	50
LSH25	30	22	20	130	85	70
LSH30	40	30	27	170	110	90
LSH35	50	35	30	210	150	120
LSH45	60	40	35	250	170	140

Note: The value in the table is the allowable value when the distance between the two linear guides is 500mm, and the allowable value is proportional to the distance between the two linear guides.

2. Height and Chamfer of Reference Edge

In order to ensure accurate installation of LSH Linear Guide, the contact space should not exceed the given figures in following table.

Unit : mm

Model	H	H1	H2	R(Max)
LSH15	3.5	3	4	0.5
LSH20	4.3	3.5	5	0.5
LSH25	6.5	5	5	1
LSH30	6.5	5	5	1
LSH35	7	6	6	1
LSH45	10	8	8	1

3. Screw Tighten Torque

When installing linear guide, whether the screws are well tighten and surface is well contacted will affect accuracy significantly. Please refer to following table for tightening force to ensure a perfect installation.

Model	Screw size	Tighten Torque(N.cm)		
		Iron	Casting	Aluminum alloy
LSH15	M4	412	274	206
LSH20	M5	882	588	441
LSH25	M6	1370	921	686
LSH30	M8	3040	2010	1470
LSH35	M8	3040	2010	1470
LSH45	M12	11800	7840	5880

4. Installation and Application

Linear guide installation methods can be divided into the followings. For installations other than forward installation, the lubricant may fail.

LSH Series

5. Datum plane

- Datum plane for installation must be ground or finely milled to ensure accuracy.
- Both sides of Rail can be used as the datum plane.
- For multi-blocks on a rail, identification line on blocks should be put on the same side to ensure moving accuracy.

6. Fixation Method

Rails and blocks are possible to be displaced while the machine is subjected to vibrations and impacts thus to affect the accuracy. In order to avoid those difficulties and achieve high running accuracy, the following four methods are recommended for fixing.

7. Rail Installation

A. Before installing the rail, remove all dirt from the mounting surface with oil stone, and then wipe with a clean cloth.

Remove all dirt from the mounting surface with oil stone, and then wipe with a clean cloth

B. Place the rail gently on the bed firstly, then put the bolts into the mounting holes and pre-tighten them, place the rail① into close contact with the datum plane of the bed by using the baffle, tighten the bolts with appropriate torque to fix the rail. Refer to "3. Screw tighten torque" for recommended torque value.

8. Block Installation

- Temporarily fix the table on the block by using the mounting bolts.
- Push the block datum plane against the side datum plane of the table and position the block by tightening the set screws.
- Tighten the mounting bolts in 1 to 4 sequences to fix the table on the block.

9. Subsidiary Rail Installation

Under the condition that the subsidiary rail has a reference datum plane, remove all dirt from the mounting surface with oil stone, and then wipe with a clean cloth, mount the subsidiary rail② with the same method of the master rail①.

Under the condition that the subsidiary rail ② has a reference datum plane, remove all dirt from the mounting surface with oil stone, and then wipe with a clean cloth,

LSH Series

10. Rail Installation without Side Datum Surface

Using a provisional datum plane

Use the datum plane provided on the bed for straight alignment of the rail from one end to the other, attention must be paid to fix two blocks in close contact on the measuring plate.

Using a straight-edge

Put the straight-edge between the two rails and use a dial gauge to adjust straight-edge in parallel with the side datum plane of the master rail. Use the dial gauge to ensure the straightness of the subsidiary rail by using the straight-edge as reference, then tighten the mounting bolts in proper sequence when the subsidiary rail is parallel to the master rail.

11. Rail Installation without Set Screws

To ensure parallelism between the subsidiary rail and the master rail in the condition without set screws, the following installation methods are recommended, and the installation of the block is the same as mentioned previously.

Installation of the master rail

Using a vice

Put the rail on the bed mounting surface and temporarily fasten the mounting bolts, then push the rail against the side datum plane of the bed by using a vice to ensure the rail position. Tighten the mounting bolts in proper sequence with specific torque.

Installation of the subsidiary rail

Using a straight-edge

Put the straight-edge between the two rails and use a dial gauge to adjust straight-edge in parallel with the side datum plane of the master rail. Use the straight-edge to ensure the straightness of the subsidiary rail, then tighten the mounting bolts in proper sequence with specific torque.

Using a table

Fix two blocks on the master rail to the table, and temporarily fix the subsidiary rail to the bed and one block on the subsidiary rail to the table. Place the gauge against the side surface of the block on the subsidiary rail, move the table from one end of the rail to the other end, then tighten the mounting bolts in proper sequence with specific torque while aligning the subsidiary rail parallel to the master rail.

Following the master rail

Fix the table to the two blocks on the mater rail and one of the two blocks on the subsidiary rail, temporarily fix the other block on the subsidiary rail to the table and subsidiary rail to the bed. Moving the table from one end of the master rail and tighten the mounting bolts on the subsidiary rail in proper sequence with specific torque at the same time.

Using a jig

Use a special jig to help ensure the position of the subsidiary rail, and tighten the mounting bolts in proper sequence with specific torque.

LSH Series

12. Rail Butt-jointed

- When it comes to butt-jointed rail installation, it must follow the butt-jointed marks shown below.
- In order to avoid the accuracy caused by installing the matched jointed rails, it is recommended to stagger the butt-jointed positions, see figure below.

- When jointing rails, it must follow group marks on rail to ensure the accuracy of linear guide. These marks are located on the top surface at joint side. Please put the same group marks together.

- Be aware serial number of group mark when assemble. A001 and B001 are in a group, so as to A002 and B002 and so on.
- Be aware the installation direction while assembly, the serial numbers are not upside down and arrows point to each other.

13. Measurement Method after Installation

When measuring running accuracy of the block, two blocks should be fixed on an inspection table in close contact to obtain stable accuracy. When using a dial gauge, a provisional benchmark (like a straight-edge) is recommended to put as close as possible to the block for accurate measurement.

Method using an autocollimator

Method using a dial gauge

LSH Series

Lubrication method

When a linear guide is well lubricated, it can reduce wear and increase lifespan significantly. Lubrication has the following benefits :

- Reduces friction of the rollers and raceway to minimize wear.
- The grease film between contact surface can prevent roller fatigue.
- Prevent rust.

1. Lubrication Grease

Use the correct grade of lubrication. While lubricating, a grease gun can be used to pump grease into slider through the grease nipple on it. The suitable condition for lube is when working speed is under 60 m/min and not in cooling process.

•Nipple type	L-P-M4	L-P-M6	L-P-SM6	L-P-P01	L-P-SP01
Grease nipple type	<p>LSH15 M4X0.7P 12 5</p>	<p>LSH20 LSH25 LSH30 LSH35 M6X0.75P 20 5.8</p>	<p>LSH20 LSH25 LSH30 LSH35 M6X0.75P 13.8 5.8</p>	<p>LSH45 PT1/8 21.5 7.5</p>	<p>LSH45 PT1/8 16 7.5</p>

•Grease amount

LSH series linear guide is well lubricated with 'Shell Alvania grease S2' in factory. Customers are recommended to use identical or the same grade of lubricant. After lubrication, block needs to be moved back and forth at least three times for the length of three blocks and repeat at least twice. Check if the surface of rail is well covered by grease film.

Model	Grease amount for the first lubrication(cm ³)		Replenishment amount(cm ³)	
	Standard type	Long type	Standard type	Long type
LSH15	0.9	-	0.3	-
LSH20	1.8	2.7	0.6	0.9
LSH25	3.6	4.5	1.1	1.4
LSH30	5.4	7.2	1.7	2.2
LSH35	8.1	10	2.5	3
LSH45	8.4	10.4	2.8	3.5

•Lubrication frequency

Although the linear guides are well lubricated at the factory and retains grease well, frequent lubrication is still necessary to avoid undesirable wear. Recommended lubrication period is every 100km of movement or every 3~6 months. (Refer to table on the top for suggested amount)

2. Lubricating oil

Recommended oil viscosity for lubrication use is about 30 to 150 cst.

Lubrication oil is suitable for all kinds of load and impact application, but not for high temperature use due to its tendency of vaporization.

•Adaptor

L-P-AM6	L-P-AM8	L-P-A01
<p>M6X0.75P M4X0.7P 17 9 3 Φ5.5</p> <p>LSH15</p>	<p>M8X1P Inner bushing (Use with soft tube, for hard tube is unnecessary) M6X0.75P 19.3 10 3.5 Φ9</p> <p>LSH35 LSH30 LSH25 LSH20</p>	<p>PT1/8 M6X0.75P 21.3 12 3.5 Φ9</p> <p>LSH35 LSH30 LSH25 LSH20</p>

LSH Series

Note: After installation, the top surface of adaptor may be higher than block. Be careful about the interference while moving.

Lubrication method

Oil supply rate

Loss of lubrication oil is faster than lubrication grease. Pay attention to sufficiency of oil while using.

Model	Oil amount for the first lubrication(cm ³)	Feeding Speed(cm ³ /hr)
LSH15	0.6	0.2
LSH20	0.6	0.2
LSH25	0.9	0.3
LSH30	0.9	0.3
LSH35	0.9	0.3
LSH45	0.9	0.3

3. Grease nipple/adaptor installation

- Grease nipple or adaptor can be installed in the two sides of block for manual or automatic lubrication based on customer's requirement.
- There are a secondary set of lubricating ports on the side of the block. When using, it is not recommended to use the side with datum line unless necessary.
- Lateral nipple installation is not recommended for flange type blocks. (The grease / oil nipple may interfere with block)
- If lateral lubrication is needed for above spec, please contact us for customization.

Bolt hole plug

1. Plug type

In order to prevent metal swarf or external objects from entering blocks and affecting precision and lifespan, customers must put plugs into holes during installation. Every rail is equipped with default plugs.

Model	Bolt	Diameter(D)(mm)	Thickness(H)(mm)
LSH15	M4	8.15	1.1
LSH20	M5	9.65	2.5
LSH25	M6	11.4	2.5
LSH30	M8	14.4	3.5
LSH35	M8	14.4	3.5
LSH45	M12	20.2	4.5

2. Plug installation Steps

Step one

Place the plug in counterbore.

Step two

Place the flat piece on mounting hole, hit the piece vertically with a plastic hammer and fix the plug into counterbore.

Note :

- Please make sure the plugs do not protrude the rail surface.
- After installation, please clean the surface before use.

Dust prevention illustration

1. Code and structure

AirTAC provides the following dust prevention accessories for the linear guides working in dusty environment, if the following accessories are demanded, please add the corresponding code when ordering.

Code	Blank: Standard	DD: Double oil scrapers	ZZ: Metal scraper + Oil scraper
Structure	<p>Top seal Side seal Oil scraper</p>	<p>Top seal Side seal (Enhanced) Double oil scrapers (Double lips, enhanced)</p>	<p>Top seal Side seal (Enhanced) oil scrapers (Double lips, enhanced) Metal scraper</p>

2. Test for high dust prevention

2.1. Test item

Test medium	Wood chip	Iron filing	Gravel
Running distance	500km	500km	500km

2.2. Test equipment

Figure1: Dust tester (Appearance)

Figure2: Dust tester (Inside)

2.3. Test condition

AirTAC adopts the industry's first dust tester (Figure 1) to simulate real working conditions, 360° without dead angles, all-round dust invasion (Figure 2). The dustproof test simulates multiple application scenarios, fully fill the air with wood chips, iron filings and gravels and are strictly tested to ensure the quality and dustproof effect of each block.

2.4. Test result

Figure3: Steel balls

Figure4: Steel balls

Result: It can be seen from the Figure 3 and 4 that little amount of dust enters the inside of the block after testing, and the steel ball surface is still smooth, the block still runs smoothly and the performance is not affected.

Note: The above test results are obtained from AirTAC lab.

3. Dimensions

Highly dustproof type blocks have different length compared with the standard blocks (only dimension C is different from the standard, the others keep same), see the table on the right for details.

Model	Type	Length C(mm)		
		Standard (Blank)	Double oil scrapers(DD)	Oil scraper+Metal scraper(ZZ)
LSH15□N	Standard	60	67	64.5
LSH20□N	Standard	76.5	84.5	81
LSH20□L	Long	90.5	98.5	95
LSH25□N	Standard	83.5	91.5	88
LSH25□L	Long	105	113	109.5
LSH30□N	Standard	95.5	103.5	100.5
LSH30□L	Long	118	126	123
LSH35□N	Standard	109	118	114
LSH35□L	Long	134.5	143.5	139.5
LSH45□N	Standard	132	140.5	136.5
LSH45□L	Long	163.5	172	168
